DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species:

Generic invention = device having transistor and including a diamond-like carbon film.

Species 1 = diamond-like carbon film on backside of substrate [e.g., claim 61 is readable on Species 1].

Species 2 = diamond-like carbon film on front side of substrate [e.g., claim 69 is readable on Species 2].

The species are independent and distinct because the positioning of a diamond-like carbon film in a device having a transistor can result in patentably distinct implementations, such a heat sink on a back of a device, or as a light blocking layer on a front side of a device.

Various prior art references that implement a diamond-like carbon film in a device with a transistor are cited on the PTO-892 included with this communication as evidence of the varied uses and divergent searches required without a generic claim presented for examination.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none of the claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

2. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references cited disclose the use of a diamond-like carbon film in a device including a transistor.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Evan Pert whose telephone number is 571-272-1969. The examiner can normally be reached on M-F (7:30AM-3:30 PM).
